

If you are interested in helping the Living well Consortium to improve ANNE even further, please contact us.

Living well with Anne

is an AAL Call 2016 project. It aims to adapt and develop an existing ICT virtual assistant currently used by independent and autonomous older adults.

The next level intends to adapt ANNE so that it can benefit people with cognitive and other problems related to the aging process and dementia.

Project start date : 01/07/2017
Duration: 36 months
Total budget: 2.5 Mio €

Consortium Partners

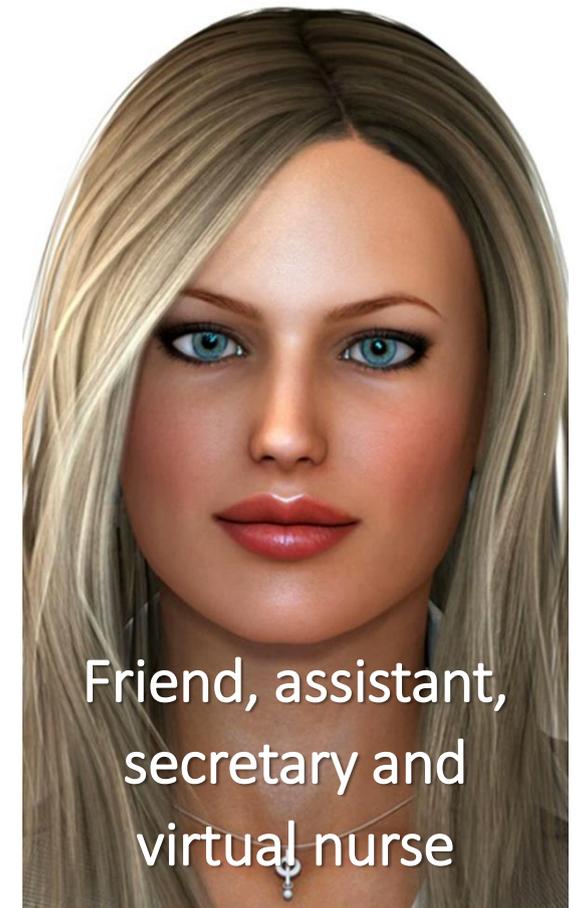

1. Virtask - Netherlands
2. Windesheim – Netherlands
3. De Parabool – Netherlands
4. INRCA - Italy
5. iHomeLab – Switzerland
6. Switzerland Innovation - Switzerland
Park Biel/Bienne AG
7. Stéftung Hëllef Doheem -
Luxembourg.

Living well with ANNE

Friend, assistant,
secretary and
virtual nurse

I am ANNE,
I can help,
I am a virtual PA. 24/7.
Just talk to me, and I'll listen.

Are you getting forgetful?

I am able to tell you all your appointments and all the information you need. I know the date and the weather, or even the football results if that's to your liking. I can remind you to take your medication, have a drink or to call your daughter.

I can even dial your daughter for you or ensure that you can see and talk to your grand-daughter via video-call.

But that is not all.

I'm growing towards being autonomous. Then you don't need to remember commands. I proactively sense what help you may need and propose various options. All you will have to do then, is choose.

That makes me the ideal companion for you, even if you were to develop further problems with your memory.

I can help you to live autonomously and dignified.

Are you taking care of elderly persons?

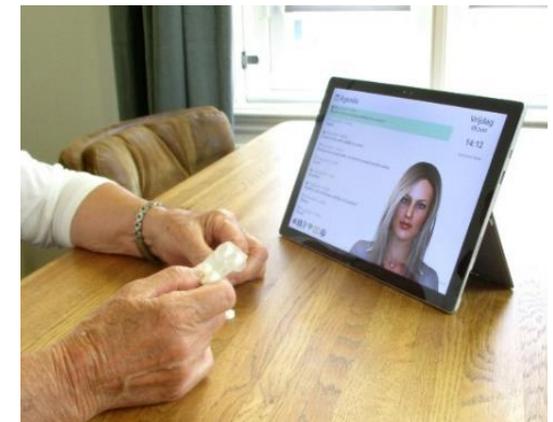

Would you like to care for them 24/7, but can't? Are you sometimes worried about your loved-ones when you are not there?

I can be your eyes, ears and voice, I can remind your loved-ones to take their medication and not to forget their doctor's appointment.

You decide when and how often reminders are to be communicated. You tell me if I should give you feedback and how often. All this and a lot more can be steered by you through a very simple interface.

I am able to establish contact between you and your loved one, both on the phone or on video-call.

Together we can ensure a normal and safe daily routine for your loved-ones, so that they can live as autonomously as possible while still being safe.

Are you a care professional, looking after older adults with cognitive limitations?

I could be your assistant and a direct link between you, your patients and their informal caregivers.

I could help organise the care you provide. I know when the client is home or not, needs help or needs to cancel an appointment with you.

By sharing that information, I could help you target your precious resources in a more efficient, effective and cost-effective manner. Thus helping you to help your patients.

I could enhance your current services by giving you video conference links to your patients. This could be a useful addition to your current community alarm and Telecare system, as you will actually be able to see your patients.

And they you.
